

# Leather Care \ Conditioning

We recommend cleaning your saddle only when necessary to remove sweat/dirt. Do so by adding a drop or two of Dawn dish detergent to some luke warm water and sponge off your tack.

Follow with conditioning and dressing your leather.

To do this, start by warming some *Hydrophane Leather Dressing*. Pour Hydrophane into a microwave/heat safe container and warm for 10-20 seconds. Brush warm Hydrophane on all leather surfaces of saddle with a soft paintbrush. Keep coating saddle leather until the dressing/oil stops absorbing into leather. It may take 8-10 coats for very dry leather.

Finish by applying *Lederbalsam Leather Dressing* on all leather surfaces to seal in the Hydrophane.

Weekly treatment can then just entail wiping down all surfaces(dont forget under the buckles) with Hydrophane then dressing with Lederbalsam.
